

*Why use
SO-IL BOOST PLUS
instead of AMS?*

Ease of use and efficacy.

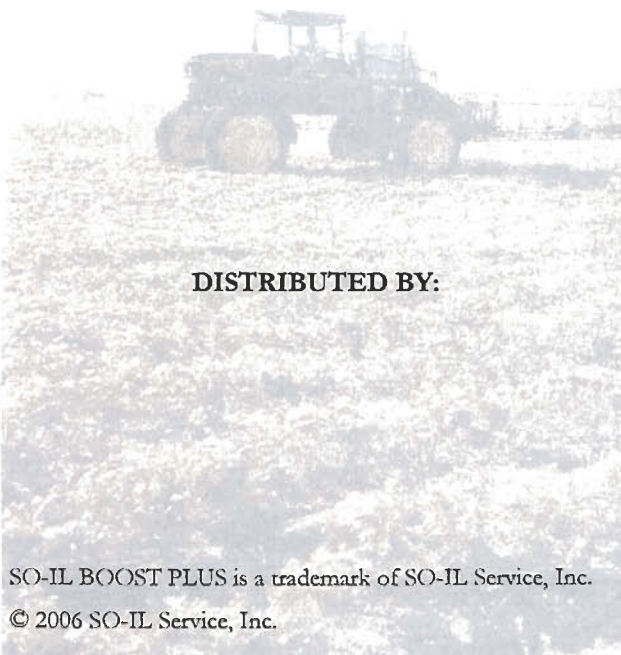

There are other AMS replacement products on the market. We feel none are the quality product that **SO-IL BOOST PLUS** is, and can't provide you with the buffering, penetration, and translocation agents along with AMS like **SO-IL BOOST PLUS**.

SO-IL Service, Inc.
91 S. Adams, PO Box 403
Carthage, IL 62321

**WATER BUFFERER
AND pH ADJUSTER**

- Liquid Formulation
AMS Replacement
- Provides all the Benefits of
AMS and SO-IL Boost
 - Easy to Use
- Contains proprietary penetration
and translocation agents
 - Acidify high pH water
 - Buffer Calcium, Iron and
Magnesium in hard water
- Improve pesticide effectiveness
- Avoid Chemical tie-up in
high pH water

SO-IL BOOST PLUS

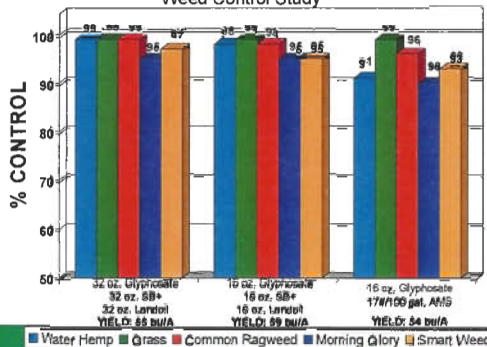

SO-IL SERVICE

SO-IL BOOST PLUS contains a pH lowering ester, which will lower the pH of your water to a certain level (around 5 pH) and stop there. Our use rate of one pint per acre will always decrease the pH to about 5, eliminating the need for a pH tester. SO-IL BOOST PLUS also contains proprietary buffering and penetrating and translocation agents to significantly boost the penetration and movement of most pesticides.

2004 AMS REPLACEMENT STUDY WITH GLYPHOSATE
 Weed Control Study

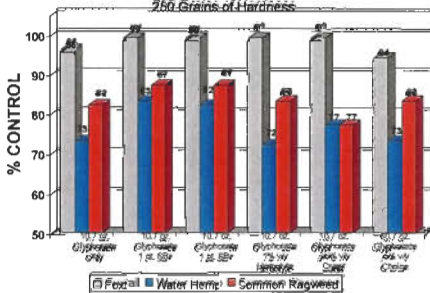

In the chart above, weed control with SO-IL BOOST PLUS was significantly better, especially on hard to control weeds such as water hemp (7% better) and Morning-glory (5% better), than with AMS alone.

Also notice that the combination of SO-IL BOOST PLUS, Landoil and Glyphosate our yielded AMS and Glyphosate by 5 bushel per acre in these replicated SIU plots. Our products will provide you better, safer weed control, causing less stress to your crop.

HARD H₂O STUDY
 250 Grains of Hardness

Above are the results of a study at SIU where SO-IL BOOST PLUS was tested along side many other liquid AMS replacement products. The study artificially hardened the water to 250 grains of hardness. A low rate of Glyphosate was then used to show the differences in effectiveness of the products.

2004 SOYBEAN FOLIAR FEEDING COMPARISONS

In addition to improved weed control, we wanted to show that our penetrating and translocation agents work with other products. To show this, we added SO-IL BOOST PLUS to a replicated foliar feeding study at Acres Research. The chart above shows that adding SO-IL BOOST PLUS to 3-18-18-1 improved the translocation and penetration and therefore the yield increased over 3-18-18-1 alone. Next, Foliar Opp outperformed 3-18-18-1 alone, but when you add SO-IL BOOST PLUS to Foliar Opp its performance (yield) was the best in the study. The increase in translocation and penetration not only helps with weed control but with translocation of nutrients as well.

Why use Landoil and SO-IL Boost Plus with today's low-priced generic herbicides?

- Superior weed kill
- Drift control
- Rainfastness in "Less than 20 Minutes"
- Improved Penetration & Translocation
