Immersive Technology Overview	
New Markets, New Opportunities	
New Warkets, New Opportunities	
Since 1995, more than 14 companies have entered the	
immersive imaging software marketplace and Apple's	
QTVR now has to compete with RealSpace, IPIX and	
Java based applications. The use of immersive images on the World Wide Web and CD ROMS is creating	
exciting new opportunities for imaging professionals	
who learn this new technology.	
My intent in this presentation is to talk about the technology. My presentation this afternoon will demonstrate the "how to".

Hardware and image capture requirements	
Film advantages:	
Cameras have manual exposure control	
Cameras can shoot faster	
Cameras have interchangable lenses	
Cameras capture more information (especially for IPIX)	
Film disadvantages:	
Scanning problems (exposure, color balance, alignment)

Immersive Imaging Opportunities	
So far, most of the applications of this new technology	
have been obvious.	
-9	
QuickTime 3 was just released and many new QT and QTVR aware applications are being produced that will	<u> </u>
extend the usefullness of QT/QTVR technology.	
*	
The real opportunities are yet to be discovered by creative	
users.
